AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (original): A mobile communication terminal equipped with a browser function,

comprising:

means for fetching melody data from a server apparatus by using said browser function;

and

tone setting means for setting ringing tones based on tone information contained in said

melody data.

2. (original): The mobile communication terminal according to claim 1, wherein if

said melody data contains no tone information, said tone setting means sets a ringing tone based

on preset tone information.

3. (original): The mobile communication terminal according to claim 1, wherein if

said melody data contains tone information, said tone setting means judges the validity of said

tone information.

2

USSSN: 09/759,220

4. (original): The mobile communication terminal according to claim 3, wherein

said tone setting means sets ringing tones by performing a modulation processing based on said

tone information contained in said melody data.

5. (original): The mobile communication terminal according to claim 4, wherein

said tone information contained in said melody data constitutes tone parameters used for said

modulation processing.

6. (original): The mobile communication terminal according to claim 2, further

comprising:

ringing-speed setting means for setting a tempo at which a melody is played in

accordance with said melody data.

7. (original): The mobile communication terminal according to claim 5, further

comprising:

ringing-speed setting means for setting a tempo at which a melody is played in

accordance with said melody data.

3

USSSN: 09/759,220

8. (currently amended): A ringing method for a mobile communication terminal equipped with a browser function, comprising the steps of:

having access to a server equipment by means of said browser function;

notifying said server equipment of desired melody data in conformity with said access;

receiving said desired melody data from said server equipment;

storing said received desired melody data-received in said receiving step;

judging whether said stored melody data stored in said storing step contains tone
information;

AI

fetching said tone information if said judging step judges it is judged that said melody data contains the tone information;

setting a tone for playing a melody in accordance with said melody data, based on said fetched tone information fetched in said fetching step; and playing said melody in said set tone set in said setting step.

- 9. (currently amended): The ringing method for a mobile communication terminal according to claim 8, wherein if said melody data contains no tone information, said tone setting step sets a ringing tone is set based on preset tone information.
- 10. (currently amended): The ringing method for a mobile communication terminal according to claim 8, wherein if said melody data contains tone information, said tone setting step judges the validity of said tone information is judged.

USSSN: 09/759,220

11. (currently amended): The ringing method for a mobile communication terminal according to claim 10, wherein said tone setting step sets ringing tones are set by performing a modulation processing based on said tone information contained in said melody data.

12. (original): The ringing method for a mobile communication terminal according to claim 11, wherein said tone information contained in said melody data constitutes tone parameters used for said modulation processing.

13. (currently amended): The ringing method for a mobile communication terminal according to claim 9, further comprising a ringing speed setting step of setting a tempo at which a melody is played in accordance with said melody data.

14. (currently amended): The ringing method for a mobile communication terminal according to claim 12, further comprising a ringing speed setting step of setting a tempo at which a melody is played in accordance with said melody data.
